Personal Profile

Results-driven Mechanical Engineering Graduate (predicted 2:1) with hands-on expertise in CAD design, CFD/FEA simulation, structural analysis, and mechanical system analysis. Proficient in SolidWorks, ANSYS, MATLAB/Simulink, AutoCAD, and Fusion 360. Experienced in delivering end-to-end engineering projects covering design for manufacture and assembly (DFMA), fatigue analysis, thermal systems, and drivetrain design. Collaborative team player with strong technical communication and problem-solving skills, seeking a Graduate Design Engineer or Graduate Mechanical Engineer role to contribute to innovative product development.

Education

BEng (Hons) Mechanical Engineering (Predicted 2:1) Jan 2024 – May 2026
Anglia Ruskin University, Chelmsford
Relevant Modules: Thermodynamics, Automation and Control, CAD Modelling, Engineering Mathematics, Materials and Manufacturing, Mechanical Systems, Fluid Mechanics

Awards & Achievements

- Completed ARU Research & Professional Ethics Certification
- Achieved high academic performance in CAD and simulation-based modules
- Selected to join the team representing ARU at the IMechE and European Railway Challenge
- Student Member of the Institution of Mechanical Engineers (IMechE)

Engineering Experience

IMechE Railway Challenge – Team Heron Project Member Aug 2025 – Present

- Produced engineering drawings and 3D components using AutoCAD
- Supported design and evaluation of railway vehicle drive systems
- Optimised design for power transmission, durability, and energy efficiency

Structural Analysis for Wind Turbine Blade Jan 2026 – May 2026

- Conducted structural analysis for a wind turbine blade using Qblade Software for aerodynamic performance evaluation
- Identified critical stress concentration zones contributing to fatigue failure and proposed geometric modifications projected to improve fatigue life under operational loading conditions

Drone Design and Optimisation Project Jan 2025 – May 2026

- Applied DFMA principles using Boothroyd-Dewhurst DFMA software to improve manufacturability and cost efficiency
- Performed FEA simulations using ANSYS to assess the structural integrity and fatigue performance of a drone.
- Designed innovative lock in mechanism for the drone

Automotive Air-Duct System Design & Simulation Project Aug 2025 – Dec 2025

- Designed an HVAC air-duct system in CAD with efficient flow routing
- Optimised duct geometry to improve airflow smoothness, split balance and outlet uniformity
- Verified performance using ANSYS, CFD and Simulink to meet pressure-drop and thermal targets

Heat Transfer Analysis Jan 2025 – May 2025

- Simulated 2D steady-state heat conduction through a carbon steel rectangle using MATLAB and the Finite Difference Method to solve the heat conduction equation.
- Analysed the impact of mesh size and boundary conditions on simulation accuracy

Joystick Component Design & Manufacturing Project Jan 2024 – May 2024

- Designed a joystick mechanism with controlled 45-degree motion in CAD
- Manufactured components using milling and lathe equipment

Strawberry Cutter Design Project

Sept 2024 – Dec 2024

- Designed and modelled a strawberry cutter mechanism, focusing on X and Y axis movements
- Developed CAD models to optimise blade travel and cut accuracy

Leadership Roles

STEM Society Treasurer & Hackathon Organiser

Aug 2024 – Present

Anglia Ruskin University, Chelmsford

- Managing budgets and allocating resources for engineering projects and events
- Coordinated finances, logistics, event schedules, roles and responsibilities to ensure smooth delivery of annual engineering hackathons
- Maintained financial transparency and accurate documentation
- Collaborated with committee members to deliver a successful, well-attended student event

Chelmsford Science and Engineering Festival Volunteer

Oct 2024

- Supported delivery of STEM workshops and public engagement activities
- Assisted with event setup, coordination, and visitor engagement
- Communicated scientific and engineering concepts to a non-technical audience

Work History

Bar Team Member at Courtyard, Chelmsford

2024 - Present

- Worked effectively as part of a team to ensure excellent customer service in a fast-paced environment, demonstrating and developing strong organisation, communication, interpersonal, multitasking and time management skills.

Key Skills

Technical: AutoCAD, MATLAB, Simulink, ANSYS (FEA, CFD), Autodesk Inventor, Fusion 360, SolidWorks, Qblade, Ansys SpaceClaim, Ansys Discovery, 3D CAD modelling, engineering drawings, manufacturing documentation, Bill of Materials (BoM), design review

IT Skills: Excel (Advanced), PowerPoint, Microsoft Word, Microsoft Project

Engineering: Mechanical design, assembly design, manufacturing design, HVAC and airflow analysis, drivetrain systems, structural analysis, DFMA, CAD-to-manufacture workflows, design for manufacture (DFM), Geometric Dimensioning & Tolerancing (GD&T)

Simulation & Analysis: End-to-end CFD/FEA simulation setup, advanced boundary condition definition, mesh refinement, result interpretation, process data analysis, result documentation, mesh sensitivity analysis, Von Mises stress, safety factor, factor of safety, Modal analysis

Analytical: Problem solving, data analysis, test result interpretation, design evaluation, root cause analysis, risk assessment, FMEA,

Professional: Technical reporting, engineering documentation, project budgeting, stakeholder engagement, regulatory compliance, positive attitude, time management

Leadership & Teamwork: Team collaboration, project coordination, event organisation

Languages: English (Fluent)

Personal Interests

- Mechanical design and engineering simulation
- Exploring new engineering tools and technical innovations
- Fitness, gym training and football
